Please work the problems in the white space provided and clearly box your solutions. You are allowed one  $3'' \times 5''$  notecard. Enjoy! Each problem is worth 10pts.

**Problem 1** Convert  $f(x,y,z) = \sin(z^3) + \frac{x^4}{x^2 + y^2}$  to cylindrical coordinates and calculate  $\nabla f$  in terms of the cylindrical coordinate frame. (leave answer in terms of  $\hat{r}, \hat{\theta}, \hat{z}$  and the cylindrical coordinates  $r, \theta, z$ )

**Problem 2** Find the multivariate power series expansion of  $f(x,y) = \frac{1}{1-x^2-y^2}$  centered about (0,0) to fourth order. Classify the critical point (0,0) as a local min., max. or saddle:

**Problem 3** Find all critical points of  $f(x, y, z) = x^2y - xy + y^2$  and classify each by the second derivative test either as a local minimum, maximum or saddle:

**Problem 4** A ninja hound is caged in an region with boundary  $9x^2 + 4y^2 = 36$ . Once his energy reaches a level of 5 he can change form into an eagle and escape by flying over the ellipse-shaped fence. Given that his energy level is f(x,y) = 3 + xy is there any place(s) in the cage which will allow him the energy to escape?

(please justify your answer by the method of Lagrange Multipliers and multivariate calculus, guessing the answer is only worth 20% credit)

**Problem 5** Suppose the mass per unit area is given by  $\sigma(x,y)=x^2$ . Find the center of mass for the rectangular region  $R=[0,1]\times[0,1]$ .

**Problem 6** Calculate  $\int_0^1 \int_{2x}^2 e^{y^2} dy dx$ 

**Problem 7** Suppose  $R = \{(x,y) \mid 0 \le x^2 + y^2 \le 9, \text{ and } x \ge 0\}$ . Calculate  $\iint_R \sin(x^2 + y^2) dA$ 

**Problem 8** Let B be part the ball of radius R centered at the origin  $(x^2+y^2+z^2\leq R^2)$  such that  $x\geq 0$  and  $y\geq 0$  and  $z\geq 0$ . Suppose  $\delta(x,y,z)=\frac{1}{1+x^2+y^2+z^2}$  is the mass-density  $\frac{dm}{dV}$  of B. Calculate the mass of B:

**Problem 9** Calculate the volume of the ellipsoid  $x^2/a^2 + y^2/b^2 + z^2/c^2 \le 1$  where a, b, c > 0.

**Problem 10** Calculate  $\int_0^4 \int_0^{\sqrt{4-x^2}} \int_0^{\sqrt{4-x^2-y^2}} (zx^2 + zy^2 + z^3) dz dy dx$ .

**Problem 11** Let R be the diamond with vertices (0,0),(1,1),(0,2) and (-1,1). Change coordinates to calculate the integral:

note:  $\int \sinh(u) du = \cosh(u) + c$ .

$$\iint_{R} \sinh\left(\frac{x+y}{2}\right) \sin\left(\frac{y-x}{2}\right) dA$$
