

Differential Equations Final Exam Overview

The Final Examination will cover the calculations of the in-class parts of Tests I,II and III. I will provide the Laplace Transform formula sheet again and you are allowed a 3x5 card for whatever notes/formulas you wish. You are allowed 3 hours for the final and it is closed-book/notes as usual with the sole exception of the notecard and Laplace Sheet.

There will also be a small portion of the final which tests if you have picked up any of the theory. Concepts such as linear independence, operators, solution may come up.
